

Audit Report: lootsa

Website: <https://lootsa.ee/>

Date: 17.08.2026

Audit Coverage: 100% — all sources returned data

Confidence: high

Pages Audited (1 of 1):

- <https://lootsa.ee/>

Summary of results

Overall Score: 73 / 100

Status: ❑ Needs Improvement

PSI mobile performance is excellent at 97 with LCP 2.0 s, but security headers score 0/100 and W3C validation has 15 errors. Two serious accessibility violations (link names, contrast) impact usability despite a 96 PSI accessibility score. The site signals indicate user-generated content (textarea, upload), elevating CSP to Priority 1. Mobile FCP is 1.97 s, slightly above the 1.8 s threshold, partly due to the hero image being lazy-loaded. Confidence is high as all audit tools returned complete data.

Per-page scores

❑ Needs Improvement · <https://lootsa.ee/>

Score	Performance	Accessibility	Best Practices	SEO	Security
73	97	96	100	92	0

PageSpeed Insights — Mobile vs Desktop

Lower is worse for Performance; higher is worse for LCP and CLS. Worse value is **bolded**.

Strategy	Performance (M / D)	LCP (M / D)	CLS (M / D)
Mobile vs Desktop	97 / 100	1.97 s / 641 ms	0.000 / 0.028

Optimization Checklist

4 of 6 passing — 4 pass · 1 warn · 1 fail · 1 n/a

Item	Status	Detail
Page caching plugin / CDN active	Pass	Caching plugin detected (WP Rocket)
Images lazy-loaded	Pass	All non-hero raster images use loading="lazy".
Hero image eagerly loaded	Fail	Hero image has loading="lazy", which delays LCP (inferred from DOM order/size — Lighthouse LCP element unavailable). Use loading="eager" (or omit loading) and add fetchpriority="high".
Hero is a real (not a CSS background-image)	N/A	No CSS background-images detected on raster-image-eligible elements.
Responsive images (srcset /)	Warn	Only 23/30 raster images use srcset or (77%).
Reasonable number of image sizes	Pass	25 distinct srcset widths.
JS scripts not blocking in	Pass	No render-blocking scripts in .

Fixes

Priority 1: Critical

Immediate action — impacts user experience, search rankings, or site safety.

1A. Add baseline security headers (HSTS, X-Frame-Options, X-Content-Type-Options) Security

- **Impact:** Transport security, clickjacking, MIME sniffing
- **Problem:** Security Headers grade is 0/100; HSTS, X-Frame-Options, and X-Content-Type-Options are missing.
- **Solution:** Add these headers to your server configuration (e.g., Apache .htaccess or Nginx config):

```
Header always set Strict-Transport-Security "max-age=63072000;
includeSubDomains"
Header always set X-Frame-Options "SAMEORIGIN"
Header always set X-Content-Type-Options "nosniff"
```

1B. Implement Content-Security-Policy (CSP) Security

- **Impact:** XSS defense-in-depth
- **Problem:** CSP is missing. Site signals indicate user-generated content (textarea, upload link), making XSS a higher risk (Priority 1 per rubric).
- **Solution:** Deploy a strict CSP using nonces or hashes rather than a flat allowlist:

```
Header always set Content-Security-Policy "default-src 'self';
script-src 'nonce-{random}' 'strict-dynamic'; object-src 'none';
base-uri 'none';"
```

Ensure your server injects the nonce into `<script>` tags.

1C. Fix hero image loading strategy Performance

- **Impact:** LCP, FCP
- **Problem:** Hero image `lootsa_hero-320x180.jpg` has `loading="lazy"`, which delays LCP (Mobile FCP 1.97 s).
- **Solution:** Remove `loading="lazy"` from the hero image and add `fetchpriority="high"` :

```

```

1D. Add accessible names to gallery image links Accessibility

- **Impact:** WCAG 2.4.4 (Link Purpose)
- **Problem:** Axe reports serious violations for 14+ gallery image links (`.gallery-slider__item > .image__link`) lacking discernible text.
- **Solution:** Add `aria-label` or visible text to each link:

```
<a href="..." aria-label="View image 1 of gallery">
  
</a>
```

Priority 2: Important

Essential for compliance, user reach, and search visibility.

2A. Fix color contrast on brand tags Accessibility

- **Impact:** WCAG 1.4.3 (Contrast)
- **Problem:** Axe reports serious contrast violation on `.tag--brand` elements.
- **Solution:** Increase contrast ratio to at least 4.5:1 for text against background. Suggest darkening text color or lightening background.

2B. Add meta description and correct language tag SEO

- **Impact:** Search visibility, screen reader language detection
- **Problem:** Meta description is missing; HTML `lang="en"` but content is Estonian.
- **Solution:** Add a unique meta description:

```
<meta name="description" content="Lõõtsa ärikvartal - äripinnad Tallinnas">
```

Change HTML tag to:

```
<html lang="et">
```

2C. Fix W3C validation errors (script types, hidden inputs) Best Practices

- **Impact:** Code quality, potential rendering issues
- **Problem:** 15 W3C errors including `script type="text/rocketlazyloadscript"` with `defer` and `input type="hidden" with autocomplete`.
- **Solution:** Update WP Rocket settings or custom scripts to use valid MIME types (e.g., `application/javascript`) or remove `defer` from non-JS types. Remove `autocomplete` from hidden inputs.

Priority 3: Best Practice

Recommended for long-term maintainability.
